GDP Formula =

[consumption] + [gross investment] + [government spending] + [Exports - Imports]

A region's Gross Domestic Product GDP is one of many ways to measuring the size of its economy. GDP of a country is defined as total market value of all final goods and services produced within a country in a given period of time (usually a calendar year). It is also considered the sum of value added at every stage of production (the intermediate stages) of all final goods and services produced within a country in a given period of time. The most common approach to measuring and understanding GDP is the expenditure method.
