**FUTURE STATE ?** ← optimized

[Optimum Medical FACILITY](#)

USA uses an inefficient version off the [dual-payer health care](#) System which has both evolved + [de-evolved](#) over past 50 years

discourages sharing best medical practices between doctors that encourages waste and even fraud in many instances  
permits excessive administrative costs structures to endure  
permits excessive legal industry overhead, tort costs, delays

does not track patient / doctor outcomes and especially success [stories](#) for determining best medical practices and procedures

driven by BIG PHARMA industry + Corporate Lobby Groups

very inefficient from a business point of view and has failed to establish common set of standard medical item codes for all medical and billing information exchanges between all entities

[care providers](#) - doctors, nurses, hospitals, clinics, etc.

+  
[billing entities](#) - insurance companies, gov't agencies, etc.

### Proposed goals: OBAMA [affordable](#) HEALTH CARE SYSTEM

- (1) provide basic human health care to all citizens
- (2) remove health care burden to small businesses
- (3) streamline existing delivery + payment systems
- (4) eliminate fragmented and wasteful systems

[universal health care](#) is provided to all its citizens who contribute on a sliding scale based on their incomes.

Its core goals are to improved access to health services, improved health outcomes, reduce inefficient wasteful practices and costs for all members in their society. This health care model is similar to concepts some prophets spoke of in several biblical passages. It also encourages its individual citizens to take responsibility for their own health by practicing healthy life styles
